

Foodzee is a food delivery android application. It helps you to find and order delicious food near you based on your current location.

You can track your order status on “My Orders” page, submit review after the food is delivered and etc.

You can customize this android code for your own need easily.

Code is fully optimized and well structured.

There is no backend support provided.

Features of the app:

- Browse Food Items
- Order Food
- Track Order Status
- Submit Your Review
- Customer Support
- Notifications(ON/OFF)
- Wishlist
- Profile and Edit Profile

if you still have any doubts about this code or any other support, don't hesitate to contact us through our profile page

Thank You

## **PLEASE READ THIS TO CUSTOMIZE YOUR TEMPLATE:**

1.Introduction

2.Setting Up Project

3.Changing the App Icon and Name

### **1.Introduction :**

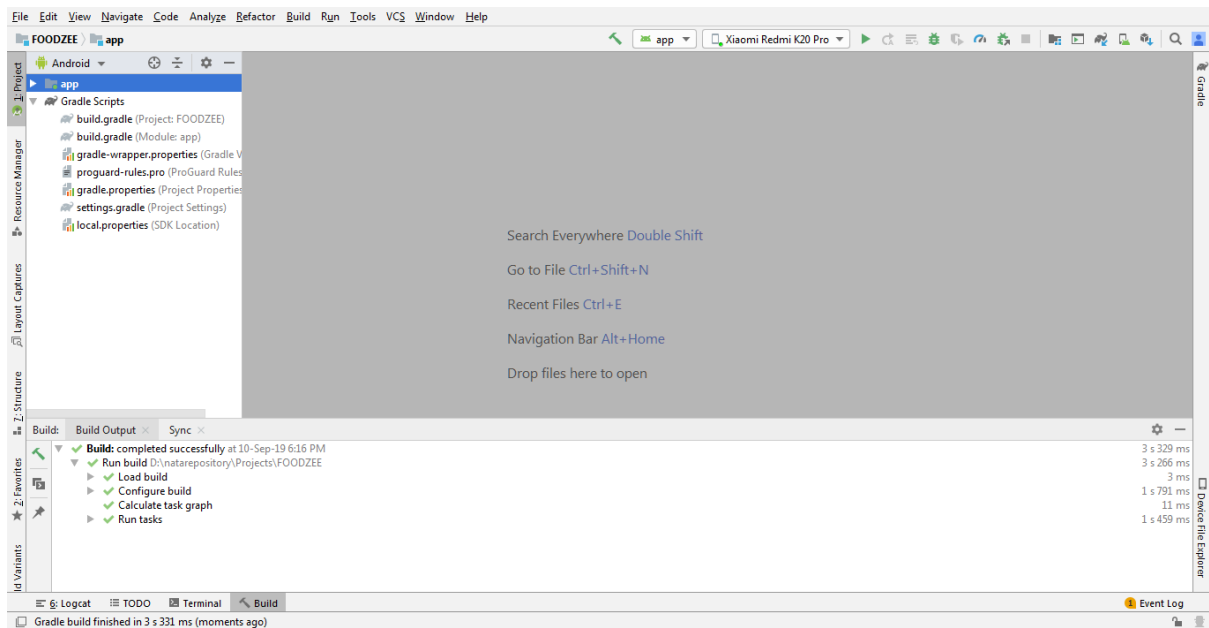

First you need to download and install android studio latest release from the site.

and install it on your computer as per the guidelines provided by google.

Then follow the below instructions.

## 2. Setting Up Project:

Just open the project and it shows like this:

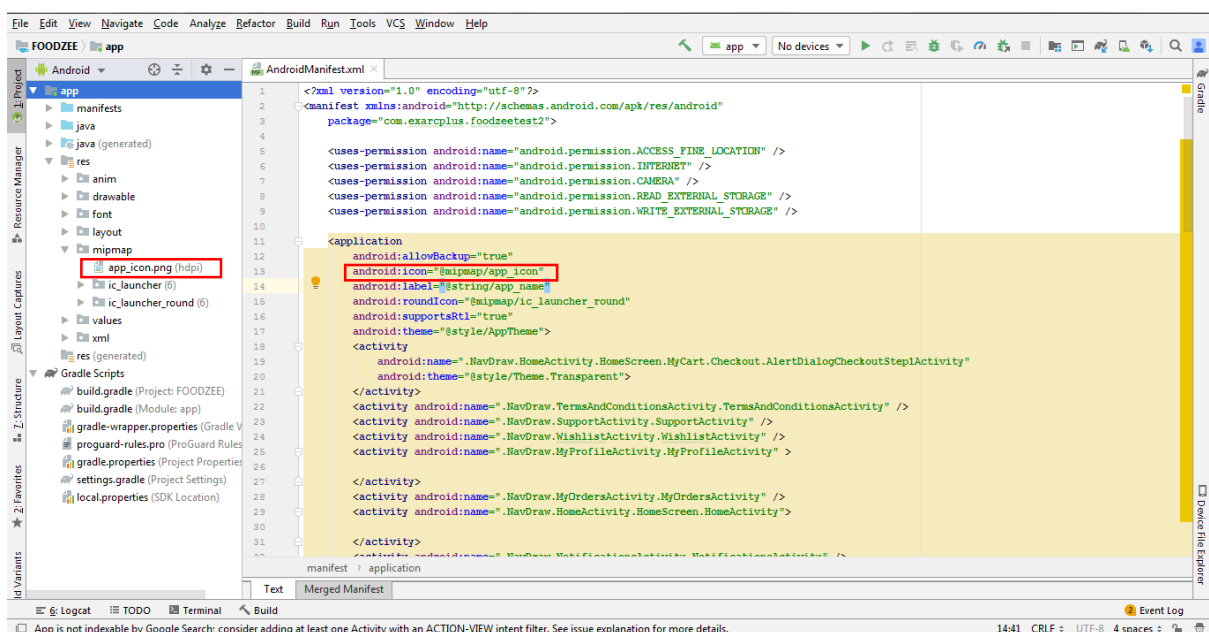

If you want change any content from the specific activity just open the related activity and do the desired edits.

**Note:** we haven't included any backend files so you just have to do the all backend works yourself.

## 3. Changing the App Icon and Name:

To change the app icon, you must go to the “AndroidManifest.xml” file.

As seen above, to change the app icon you must add your own image file into the mipmap folder, after which you must edit the code highlighted in the android manifest image above.

Make sure that both the image name in the folder and code are the same.
